

CITY HUNTER

Written in Basic for the TI99/4a

Quick reference guide

Note this software is designed only to be used on the TI99/4a computer. Important keys are listed here for your convenience.
SET CAPS LOCK TO OFF.

S, D Moves your scramjet left and right

E, X Moves your scramjet up and down

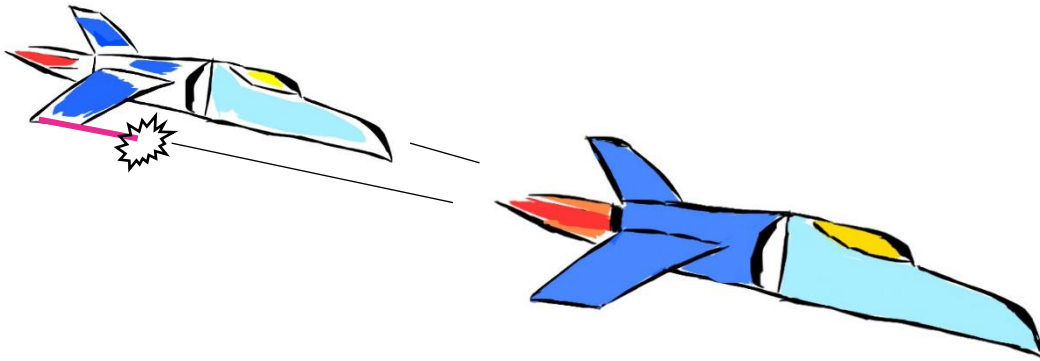

B, H Moves your scramjet into out or into the screen

SPACE BAR Launches your scramjet to rescue a citizen

ANY KEY to play again after the game ends

Wired Remote Controllers are not supported.

CITY HUNTER A CAPTAIN SCRAM GAME

Hunt and be hunted as you navigate Captain Scram around city buildings looking for citizens to rescue. Outmanoeuvre an enemy chase ship that's always present and its mothership that occasionally swoops down from the sky.

This game is written in TI Basic, for the unexpanded TI99/4a. Full use is made of colour, character redefinitions and the parallax effect to generate the illusion of three dimensions.

GETTING STARTED

After the title screen the city buildings are drawn on the screen and the Captain's scramjet and the chase ship are hovering above the city. The score is shown in the top right corner of the screen and the number of scramjets left are shown in the top left of the screen.

A point is awarded each time Captain Scram saves a citizen from a building. A ship is lost if your scramjet collides with a building or the chase ship or mothership, that occasionally swoops down, shoots you. The game ends when all the scramjets have been destroyed.

CONTROLLING THE SCRAMJET

The scramjet can be steered in three dimensions, vertically, horizontally across the screen and horizontally into the screen. To move the scramjet forwards press D and in the reverse direction press S. Up and down use E and X. To move into the screen press H and to move out of the screen press B. To attempt a rescue press the SPACE BAR.

It is important to note that manoeuvring the ship into or out of the screen is the only way you can avoid the mothership which will otherwise hover above you until it is ready to shoot. The chase ship can be avoided this way and also by moving vertically.

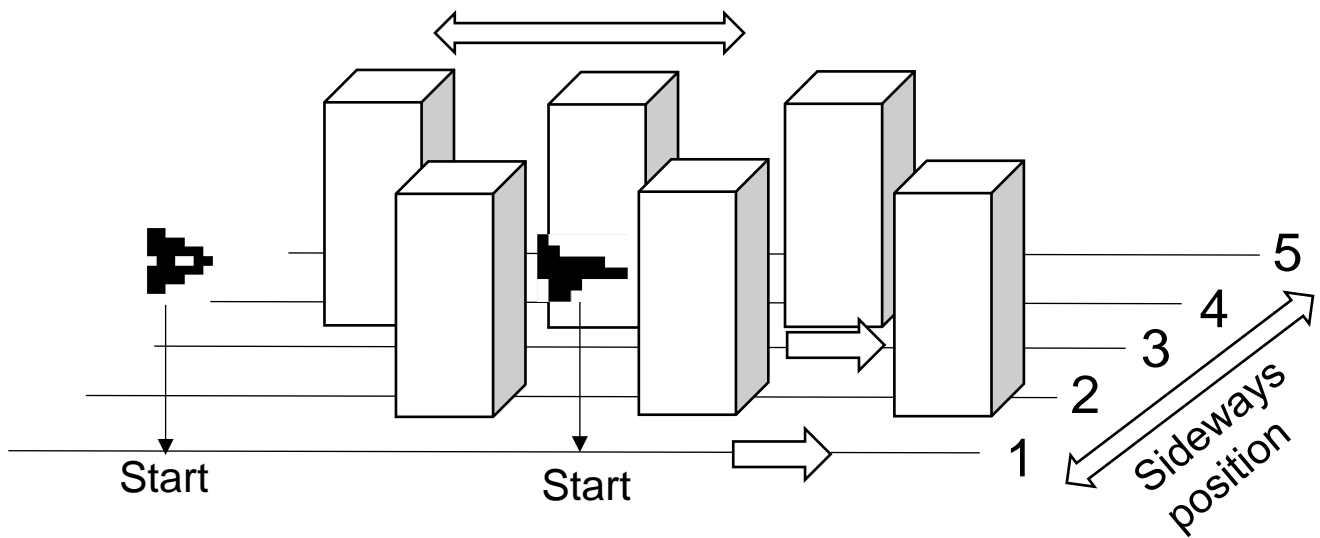

To rescue a citizen the ship has to be positioned at the correct horizontal distance into the screen. There are five possible locations into the screen that can be occupied by the scramjet. Two of these locations allow a rescue to take place. These positions are number one where the ship appears closest and position number three where the ship is mid-way to the furthest point possible into the screen.

CITY HUNTER

PLAYING THE GAME

Schematic of the city with game elements

scramjet

chase ship

mothership

a citizen by a window

When the game starts your scramjet will be positioned as shown in the schematic above with a **chase ship** on your tail. You can avoid the chase ship by pressing H to move sideways into the screen or move vertically (E or X). The chase ship will fire at you at random intervals however it is not very good at locating your position so by moving to a new position you may be immune to its fire for a while.

From time to time a **mothership** which will swoop down to help the chase ship destroy your ship. The mothership will fire on you after a set amount of time. Again it is possible to avoid its fire but only by moving sideways. Be careful you do not move into the path of the chase ship which may be hiding behind a building. After losing five ships the game will end. Press any key to play again.

To score points you need to rescue **citizens**. They will be waiting for you by a window in a building. To rescue a citizen from a building first you need to be located on sideways position 1 or 3. Then your vertical position needs to be the same as the citizen in the window. After you are lined up press the space bar. You will be awarded one point for each rescued citizen. After rescuing 10 citizens you will advance onto a more difficult level.
