

## **AEMS System and Boot Code Update History**

**V1.x** Runs only on the AMS 128-512K card.

### **V1.0 November 1992**

Initial release of the AEMS system.

### **V1.1 January 1993**

Corrected several errors.  
Added "EXIT TO TI" menu item.  
Additions to "Memory Status".  
RAM stmt added to ABOOT.  
PATCH stmt completed in ABOOT

### **V1.2 April 1993**

Fixed bug in ALLOC. It did not restore user's page at  
>B000 if "Memory Full" error exit was taken.

Fixed bug in FREE. It did not restore user's page at  
>B000 if page to be freed was out of range.

Fixed loader for AEMS and Overlay programs to comply  
with a change in the spec forced by V1.0 of the  
Linker.

### **V2.0 January 1996**

Support for the Southwest 99ers Super AMS card added.  
SAMS support is enabled by the SW99 Statement in the  
Boot File, AEMSSYS. The SAMS card can map the pages at  
>2000 and >3000 which the AMS card can not. Using the  
SAMS card the following programs can be made resident  
and immediately available:

AEMS Macro Assembler  
AEMS Linker  
AEMS Library Manager

When resident, these programs retain the previous  
parameter values. In addition, the Assembler retains  
the macro definitions in memory.

Note that the logo on the ABOOT program and the AEMS main  
screen and manual have been slightly changed to distinguish  
it from any of the V1.x versions.
